

Building new dictionaries

ELEXIS will play a key role in building new dictionaries. While the project is not concerned with dictionary building itself, it will open the existing resources, digitize legacy data, develop new language tools and services and make them accessible in a network open to lexicographers, researchers, software developers and other communities. This interlinked infrastructure will facilitate fast building of high-quality dictionaries and databases.

'No one needs dictionaries anymore.'

ELEXIS: 'More people than ever before use dictionaries. Not so much printed ones, but dictionary data are now built into mobile phones, software, systems and are in use all the time. New and updated dictionaries are badly needed fast.'

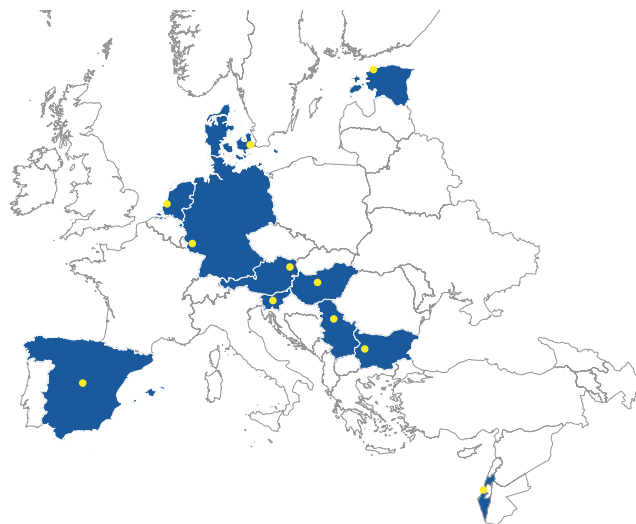

Travel for research

ELEXIS offers **grants for research visits** to facilitate the mobility of researchers and maximise the availability of data, tools, services and resources.

Institutions available for visiting

- Slovenia** Institut Jozef Stefan (JSI)
- The Netherlands** Dutch Language Institute (INT)
- Austria** Austrian Academy of Sciences (OeAW)
- Serbia** Belgrade Center for Digital Humanities (BCDH)
- Bulgaria** Institute of Bulgarian Language Lyubomir Andreychin (IBL)
- Hungary** Hungarian Academy of Sciences (RILMTA)
- Israel** K Dictionaries (KD)
- Denmark** Det Danske Sprog- og Litteraturselskab (DSL) & University of Copenhagen (UCPH)
- Germany** Trier Center for Digital Humanities (TCDH)
- Estonia** Institute for Estonian Language (EKI)
- Spain** Real Academia Española (RAE)

Opening up dictionaries, linguistic data and language tools for European communities.

What is it? How to gain access?

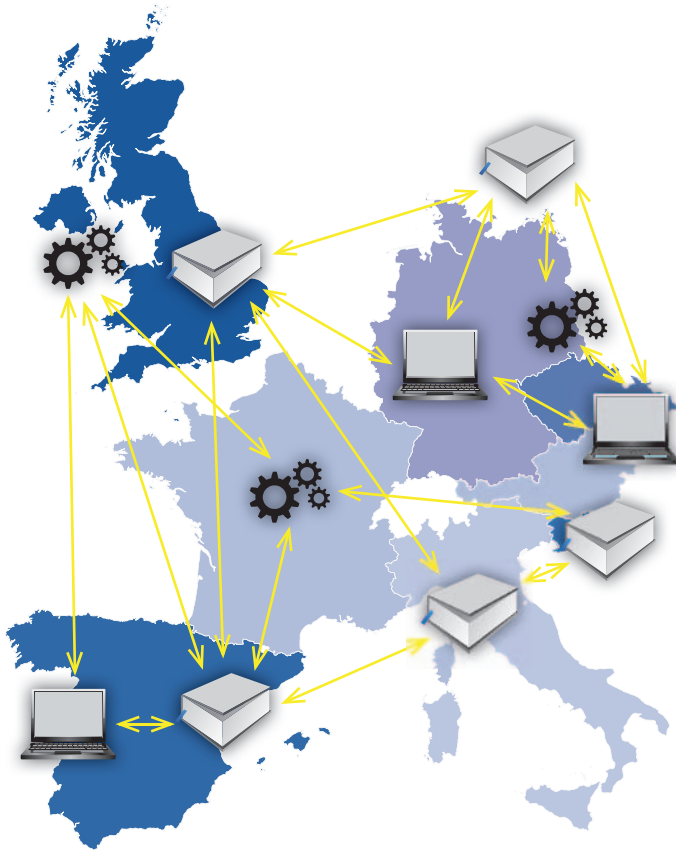

information inside

EUROPE the home of isolated dictionaries

Europe is the home of some of the greatest dictionaries and other lexicographic resources. But they are **isolated**. Linking them, digitizing, standardizing their formats and making them talk to each other will create a unique network aided by the latest language software and tools.

This is what ELEXIS aims to achieve.

Who is ELEXIS for?

ELEXIS aims to address the widest audience possible: from experts and academics to the general public and casual users in need of linguistic information and data.

Lexicographers & linguists

Enrich your own lexicographic data or benefit from the data provided by the whole community.

Technology experts

Improve the quality of your algorithms and applications with validated linked open language data.

Digital humanities experts

Use the new tools to explore your textual data and benefit from links to modern and historical resources.

Commercial entities

Join ELEXIS with an **observer status**, enhance your data by accessing our infrastructure, tools and services based on validated high quality data.

General public

Language enthusiasts, learners or teachers can benefit from new and updated dictionaries and digital language tools.

Gain access to tools and data

Academic institutions throughout the EU will have access to a variety of resources as they are developed and made available in the course of the project.

Find out what is available already!

Gain access for your institution.
